

Monday 11<sup>th</sup> January 2021

Morning Sapphire,

I hope that everyone's keeping themselves safe and well. Remember that Joe Wicks is on at 9am, **parents please supervise as this is a You Tube video**. I've organised some nice activities for you, so get organised, remember you're pupil and teacher and have a good day home schooling.

PE: Joe Wicks daily workout. You can use either the live workout at 9am or one of the recorded ones, which there are plenty of on The Body Coach, Home Workouts [P.E with Joe | Monday 23rd March 2020 - Bing video](#) .

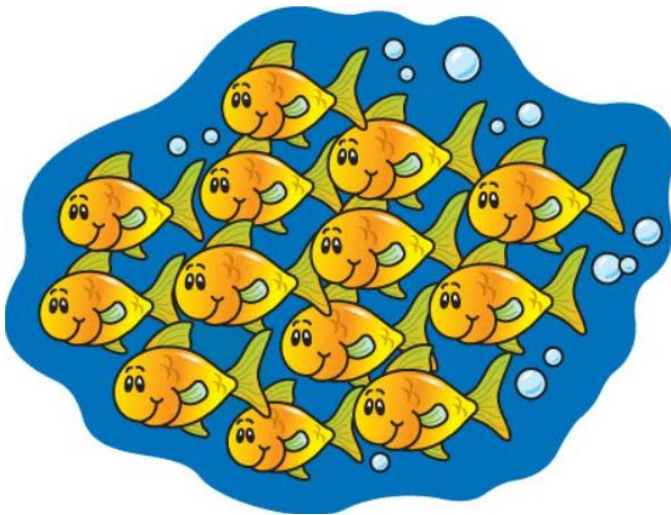

Maths: Written Methods. Use the video lesson [Spr4.1.5 - Written methods on Vimeo](#) and have a go at the activity sheet. As usual there's also a challenge for those of you that would like more or something a little harder. **Parents**, challenge answers at the bottom of the page.

English: Reading Comprehension. As our topic is about rivers and mountains, I thought it would be interesting and important for us to study pollution in our water system. This reading comprehension will give you facts about the impact plastic has. Read through the text and answer the questions in full sentences, remembering to use your best handwriting and punctuation skills.

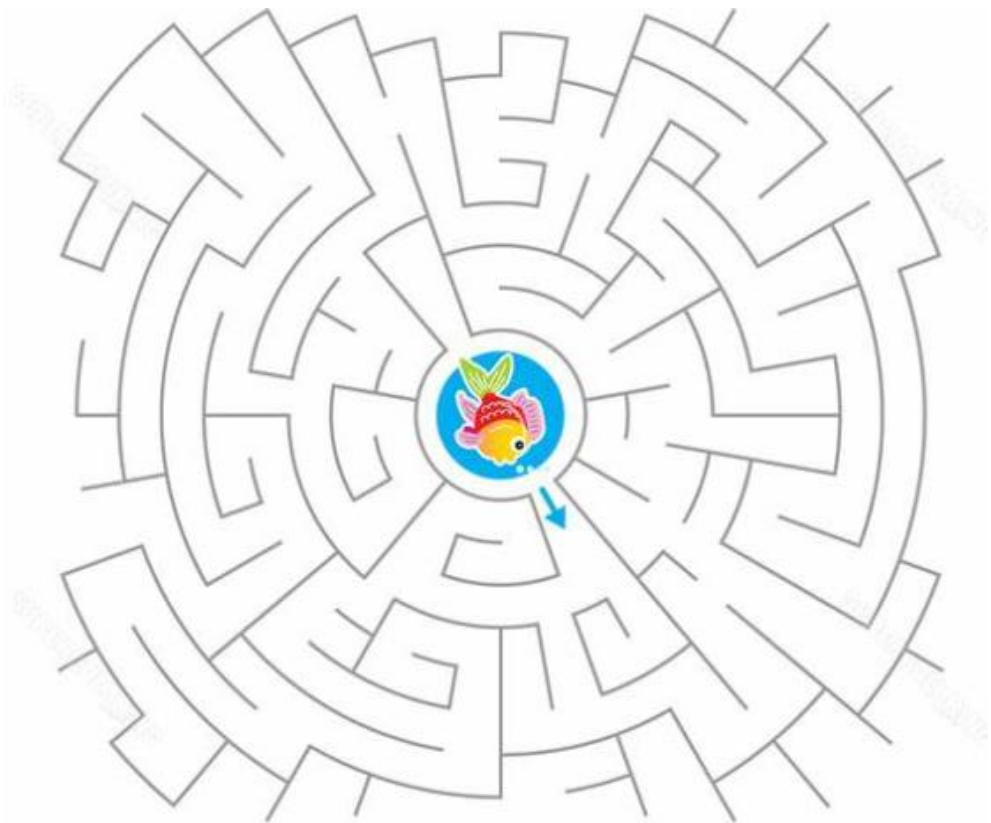

Topic: Watch the 2 films about rivers [Rivers - BBC Bitesize](#) and have a go at labelling the parts of a river on the sheet. I've attached a detailed and labelled diagram to help. When you've managed to label each part of the river, colour it in really neatly.

Bad Teacher Joke: How do you catch a whole school of fish?

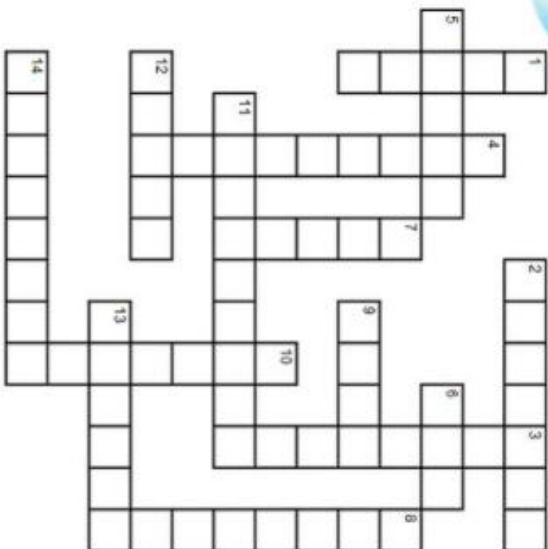

**Answer:** With bookworms.

Just for fun...

## Ocean Animals

### ACROSS

- fat layer that keeps some marine mammals warm
- fish use these to breathe oxygen from the water
- name for a group of whales
- ocean dwellers that lay eggs and have bones
- what a shark has instead of bones
- a shark has several rows of these
- what younger whales are called
- marine animals with soft bodies and no backbone

### DOWN

- small creatures that look like shrimp
- how a whale or dolphin breathes
- largest animal in the world
- bioluminescent animals make their own
- clams, oysters and scallops are all ...
- ocean dwellers that birth live babies and nurse their young
